

PestPac QA Export Requirements

Reference guide for exporting the correct commercial account data from PestPac for integration into the Virginia PMP Operations Platform.

Primary Goal

We need a clean export of ACTIVE COMMERCIAL ACCOUNTS from PestPac so the QA Operations Center can:

- Track QA visits
- Group accounts by POC/company
- Identify high-value operational relationships
- Track recurring issues and training opportunities
- Connect PestPac accounts to QA/account intelligence

Required PestPac Filters

Filter	Required Setting
Account Type	Commercial ONLY
Account Status	Active Accounts Only
Location Status	Active Locations Only
Branch	Your branch only (if applicable)

Must-Have Export Fields

- Location Number / Account Number
- Customer / Company Name
- Location Name
- Service Address
- City
- State
- Zip Code
- POC / Contact Name
- Phone Number
- Email Address (if available)
- Annual Value / Recurring Revenue
- Service Type / Service Code
- Service Schedule / Frequency

- Assigned Technician
- Branch / Office

Nice-to-Have Fields

- Route
- Last Service Date
- Next Service Date
- Contract Start/End
- Property Type
- Salesperson / Account Manager
- Billing Customer / Parent Company
- Customer Category
- Internal Notes

IMPORTANT QA LOGIC

The Operations Platform will ONLY prioritize QA groups with an annual value of **\$2,500 or greater**. However: \$0 value locations should STILL be included if tied to the same: POC Company Management group Example: Main apartment complex = \$18,000 Clubhouse = \$0 Maintenance building = \$0 Overflow property = \$3,200 The system will group these together operationally.

Preferred Export Format

Preferred file types: Excel (.xlsx) CSV (.csv) Best practice: One row per LOCATION / ACCOUNT NUMBER Do NOT summarize/group accounts inside PestPac before export Let the Operations Platform handle grouping logic

Final Recommendation

The cleaner the initial PestPac export is, the more accurate the QA Operations Center will become. This export will eventually support: QA visit tracking Account health monitoring Training opportunities Recurring issue tracking Technician coaching Operational analytics
