

Better Bed Bug Solutions

 **BASF**

We create chemistry

Once nearly eradicated, today bed bugs remain a huge problem in North America and globally. They infest homes and businesses - virtually anywhere people gather. There's nothing stopping these pests from traveling and thriving. Except you and BASF solutions.

Thinking beyond the bed can save callbacks

Perhaps "bed bugs" is a misnomer. These pests could just as easily be called suitcase or backpack bugs, or even living room bugs. Bed bugs often spread beyond sleeping areas, appearing on surfaces like chairs, rugs and carpets, and walls. Thorough inspection and treatment of these areas can be the difference between a good and a great bed bug control strategy.

Data indicates that approximately 43% of bed bug sightings occur away from the mattress, reinforcing the need for a comprehensive site-wide approach. While mattress encasements may help reduce infestations on mattresses and box springs, they don't prevent bed bugs from inhabiting the exterior of the encasement. In fact, some practices drive bed bugs to relocate elsewhere in the room—further emphasizing the importance of whole-room treatment plans.

Find Them Where They're Hiding:

- Boxspring
- Couch/Chair
- Mattress
- Frame/Headboard
- Walls/Ceiling
- Baseboard Areas
- Nightstand/Dresser
- And More

Bed Bugs: A Steady Source of Business

Bed bugs continue to be a reliable revenue stream for Pest Management Professionals (PMPs). When clients discover an infestation, they want fast and effective solutions—often immediately! These pests not only cause physical discomfort through bites and skin irritation, but they also create a strong perception of uncleanliness and can take a serious emotional toll on those affected.

This is your opportunity to stand out. Equip yourself with top-tier products and expert training from BASF to deliver results your clients can trust—and build a stronger, more profitable bed bug service.

Two Revenue-Building Strategies

BASF solutions help you build revenue in two ways. First, by helping you address active infestations and second, by allowing you to offer your customers a proactive, long-term, maintenance approach.

Active Infestation Program

Use the right solutions for quick cleanout of active infestations, eliminating hard-to-find, persistent and increasingly pervasive bed bugs right away.

How the Active Infestation Program Works

Set clear expectations

Inform customers that re-infestations can easily occur when humans unknowingly introduce bed bugs from places they frequently visit. Bed bugs are well known “hitchhikers” on personal belongings, furniture, and luggage. Arrange follow-up inspections every one to two weeks.

Choose the right products

Reference the included diagram for recommended uses and product selection when treating mattresses, box-springs, headboards, bed frames, and other areas in the room. Always read and follow label instructions. For direct application to mattresses and luggage, use

PT® Alpine® Flea & Bed Bug pressurized insecticide.

Treat likely hideouts

For applications to areas where bed bugs hide, we recommend crack & crevice treatments. Bed bugs often hide around bed frames, box springs, headboards and in cracks and crevices associated with baseboards, moldings, carpet edging, wall fixtures, night stands, dressers and other furniture. Spot treatments are recommended for baseboards, undersides of dressers, drawers and other furniture near bed bug gathering sites or along their feeding routes.

Inspect, inspect, inspect

Follow up inspections are recommended every one to two weeks until there are no more bed bugs. If bed bugs are found during the inspections, reference the included diagram for best product selection. Note that product application and inspection can be done simultaneously, creating efficiency while saving on labor costs. Refer to product labels for re-application requirements.

Maintenance Program

Once bed bugs are no longer found during inspections, upsell existing customers to the maintenance program for recurring revenue.

Maintenance Program

Be proactive with a strong maintenance program that allows you to keep bed bug populations in check before they become a widespread problem.

How The Maintenance Program Works

Everyone benefits from a maintenance program that sells itself

No one wants bed bugs, especially homeowners, property managers, and hospitality managers. And whether you have just cleared an active infestation, or you are working to prevent an initial outbreak, maintenance programs can be a ready source of work, and profits.

Multi-unit complexes are primed for a maintenance program because it makes bed bug control a **budgetable line item** for homeowner associations and property managers at the beginning of the year. It stops the unpredictable expense of a widespread bed bug outbreak and gives the property manager peace of mind that bed bugs are under control. Best of all, a maintenance program gets you repeat business and recurring revenue.

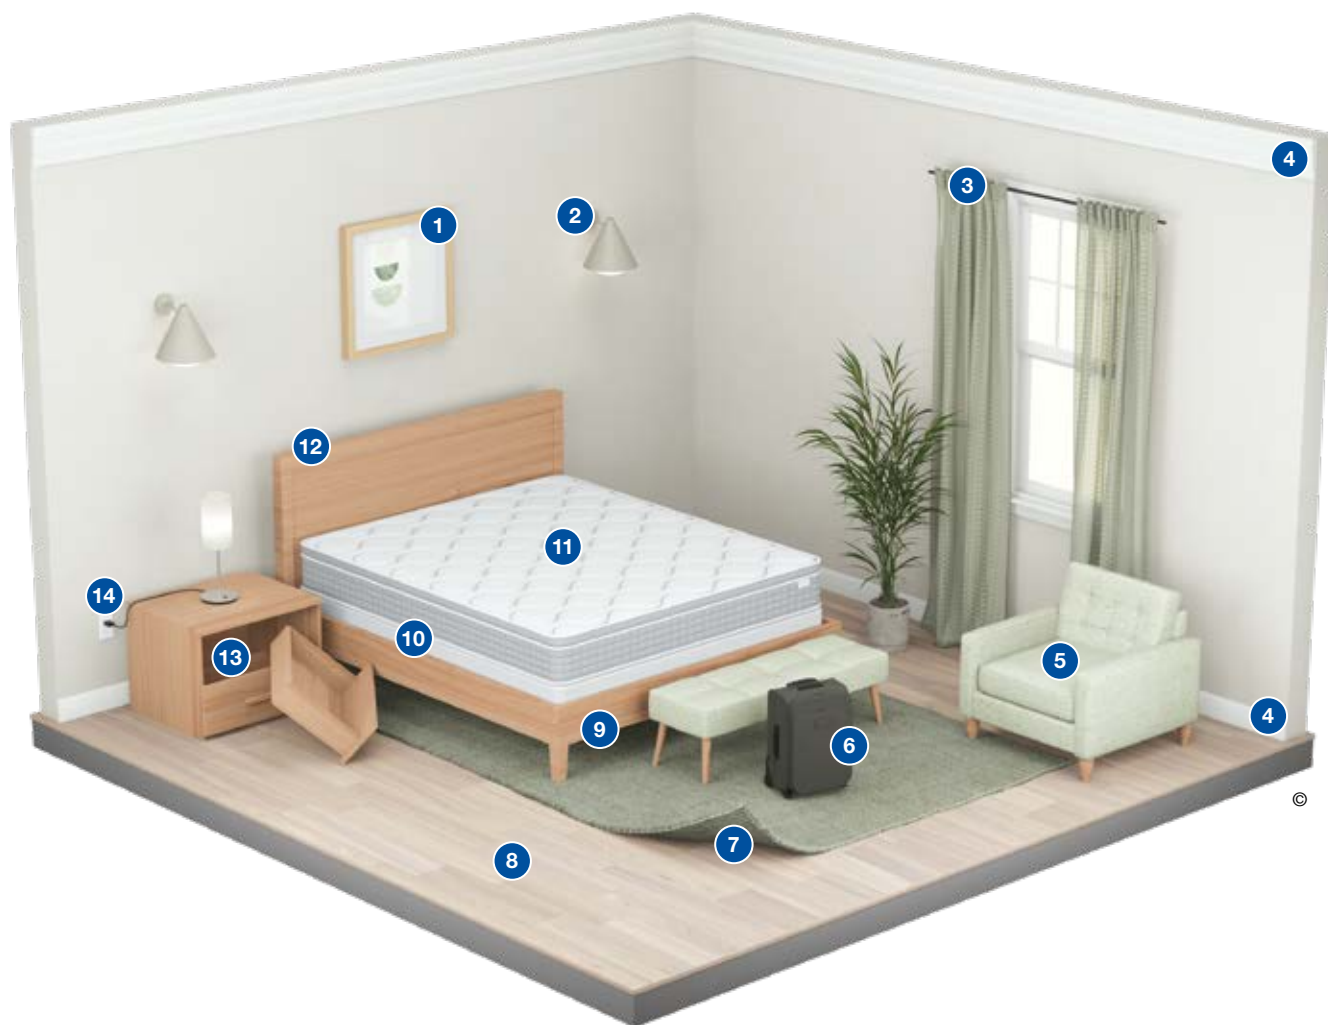

Treatment

Bed bug infestations may begin with the introduction of secondhand mattresses and furniture, luggage, and even laundry. Re-infestation is likely, especially in multi-unit complexes and shared spaces such as hotels and rental properties. By performing a thorough inspection and treatment every three months, accounts are prepared for hitch-hiking bed bugs.

Details of recommended routine inspection and treatment sites can be found in the included diagram.

Prevention Program: use PT Phantom II pressurized insecticide every six months around areas likely to contain bed bugs but areas humans and pets are unlikely to come in contact. Use the included diagram to determine the best product choice and where to use them around the room. During each application, inspect thoroughly for signs of bed bugs.

Prevention Program: use Ridesco® WG Insecticide every three months. A prevention program includes the use of products, shown in the diagram, to treat different areas around the room. During each application, inspect thoroughly for signs of bed bugs.

Product(s):
Recommended / Optional Treatment Recommendations

1	PT Phantom II* / Ridesco WG*	Remove pictures and other wall hangings to treat cracks and crevices.
2	Alpine D Dust / Tri-Die Dust	Treat around light fixtures. Do not use liquids around or near electric wiring.
3	PT Alpine Flea & Bed Bug	Remove curtains and either treat, steam, or dry them on high heat as allowed by the fabric. Treat the curtain support brackets as well, and always test first to avoid staining.
4	Ridesco WG / PT Phantom II	Treat gaps along baseboards, especially behind bed and other furniture. Also treat gaps behind wood paneling and crown moldings, etc.
5	PT Alpine Flea & Bed Bug / Ridesco WG	Inspect and treat upholstered furniture, including seams and folds, legs, and liner on the underside.
6	PT Alpine Flea & Bed Bug	Inspect and treat luggage, luggage racks, luggage storage closets, school bags and backpacks, etc.
7	Ridesco WG / PT Alpine Flea & Bed Bug	Pull back carpets or rugs to treat underneath, paying close attention to room edges and baseboard moldings, including tacking strips.
8	PT Alpine Flea & Bed Bug	Apply as a general surface to carpets and floors, paying close attention to the perimeter of the room.
9	PT Phantom II / Ridesco WG	Inspect bed frame thoroughly and treat wheels, casters, posts, legs, metal brackets, screws, and/or screw holes, etc.
10	PT Alpine Flea & Bed Bug / PT Phantom II / Alpine D Dust	Inspect box springs thoroughly and treat the sides, undersides, and interior areas where bed bugs and eggs may be found. Alpine D Dust can be applied inside the box spring.
11	PT Alpine Flea & Bed Bug	Remove linens before application and apply to edges, tufts, folds, sides, and seams of the mattress. Read label directions as they pertain to mattresses prior to treatment.
12	Ridesco WG / PT Phantom II	Remove and dismantle headboards from the wall and bed frame to treat crack and crevices, voids, and surfaces that will not come in direct contact with humans and pets. Test treatment on a small inconspicuous area first.
13	Ridesco WG / PT Phantom II	Remove drawers and contents before treatment. Let treated surfaces dry before replacing items. Do not apply to surfaces that will come in direct contact with linens, clothing, etc.
14	Alpine D Dust / Tri-Die Dust	Remove face plates and treat inside electrical outlets. Do not use liquid formulations and aerosols near electricity.

*Phantom and Ridesco products should only be used in areas not likely to come in contact with people and pets.

Combat Bed Bugs with these BASF Solutions

Ridesco® WG

Insecticide

Advantages of **Ridesco® WG** insecticide include:

- Quick activity, dual-active formulation for fast results
- A broad label, including where there is evidence of bed bugs
- Easy to measure, mix, and apply with a flexible label
- **Ridesco WG** kills pyrethroid-resistant strains of bed bugs
- Great residual control on a very difficult surface – unfinished wood

Phantom®

Insecticides

Advantages of **Phantom®** insecticides include:

- Non-repellent, pro-insecticides
- Great residual on difficult surfaces – unfinished wood – one of the many places bed bugs love to congregate
- **PT® Phantom II** pressurized insecticide and **Phantom** termiticide-insecticide kill pyrethroid-resistant and neonicotinoid-resistant strains of bed bugs
- **PT Phantom II** provides convenient and precise crack & crevice applications

Alpine®

Insecticides

Advantages of **Alpine® D** dust insecticide and **PT Alpine® Flea & Bed Bug** pressurized insecticide include:

- **PT Alpine Flea & Bed Bug** pressurized insecticide kills bed bugs, including during egg hatching
 - Premixed, with a flexible label and can be used on mattress tufts, folds, and seams
 - Kills pyrethroid-resistant strains of bed bugs
- **PT Alpine Flea & Bed Bug** pressurized insecticide is a ready-to-use aerosol that is quick to apply and dries fast allowing a shorter re-entry time
- Dinotefuran, the non-repellent active ingredient in **Alpine®** insecticides, has been granted Reduced Risk status for public health and food handling use by the EPA
